

Parapet covers provide an aesthetics and economic finish for parapet walls of the buildings. They are manufactured on order as per the requirements of the project. Aluminum brackets are screwed on the wall with 50 cm intervals and cover plate is placed on them. Covers give a decorative aspect to the parapet walls with their anodizing finish and can also be powder coated to any RAL color. Anodized covers are manufactured from hot rolled aluminum while the powder coated ones are manufactured from cold rolled aluminum. Internal & external corner pieces can be manufactured only powder coated.

Application Areas : Outdoor / Wall
Ideal for : All buildings with parapet walls
Material : Aluminum (Hot or cold rolled)
Finish : Anodized or powder coated
